👤 PROFESSIONAL PROFILE

- Auckland-based Master of Software Engineering student, expected to graduate in April 2027, with 4+ years of professional software engineering experience, including 4 years at Huawei and backend internship experience at OKX.
- Backend and platform-oriented engineer with experience in Java/Spring Boot microservices, Kubernetes-based services, distributed systems, event-driven architecture, production debugging, code review, and cross-team engineering delivery.
- Practical cloud-native skill set covering AWS, Azure, Kubernetes, Terraform, CI/CD, observability, monitoring, root-cause analysis, and reliable infrastructure for production-oriented systems.
- Currently undertaking intensive hands-on Terraform practice aligned with Terraform Authoring and Operations Professional, focusing on reusable modules, testing, automation, and production-style workflows.

⚙️ CERTIFICATIONS

- AWS Certified Solutions Architect – Professional (AWS SAP)
- Microsoft Certified: Azure Solutions Architect Expert (AZ-104 + AZ-305)
- Certified Kubernetes Application Developer (CKAD)
- AWS Certified Developer – Associate (AWS DVA)

🏆 AWARDS & RECOGNITION

- Spring 2026 Linux Foundation LiFT Scholarship Program Awardee – Systems & DevOps category.

⚙️ SKILLS

- **Backend & Distributed Systems:** Java, Spring Boot, Spring Cloud, Node.js, REST APIs, SQL, PostgreSQL, MySQL, Redis, message queues, Aeron Archive, TypeScript, React
- **Platform Engineering:** Terraform, Docker, Kubernetes, Kustomize, GitHub Actions, CI/CD, Argo CD, Argo Rollouts, canary deployments
- **AWS & Azure:** AWS IAM, VPC, EC2, S3, RDS, Lambda, CloudWatch; Azure VNet, AKS, Azure Monitor, Log Analytics

👛 WORK EXPERIENCE

Huawei Technologies Co., Ltd. – Software Engineer

12.2021 – 12.2025

Cluster Computing Network Development Department

- Designed and implemented backend services for cluster network management systems, covering configuration, monitoring, traffic shaping, congestion scheduling, host security, and device port management scenarios.
- Built and maintained Spring Boot-based microservices deployed on Kubernetes, supporting scalable service delivery, consistent deployment workflows, and long-term maintainability.
- Defined cross-service communication interfaces using Thrift IDL and synchronized operational data between distributed services and in-memory data stores.
- Investigated defects and reliability issues using static code scanning, debugging tools, logs, distributed tracing, packet analysis, and production-oriented troubleshooting workflows.

- Participated in Agile delivery, requirement analysis, code reviews, technical documentation, sprint planning, and cross-team collaboration with CLI and Linux SDK teams.

OKX – Java Software Engineer Intern

07.2021 – 10.2021

- Worked in a core matching system team and gained hands-on exposure to event-driven architecture, high-performance backend systems, and reliability-sensitive trading infrastructure.
- Worked with Aeron Archive concepts for message storage and replay, supporting auditing, fault detection, and market data distribution scenarios.
- Built practical experience in Java backend development, Maven builds, Spring Cloud concepts, distributed service debugging, and performance-oriented testing.

SELECTED PROJECTS

Cloud Governance X – Cloud Governance and FinOps Platform Ongoing | Active development

Implemented Stack: .NET 10, PostgreSQL, Terraform, GitHub Actions, Docker, Azure SDK, Azure Resource Graph, Azure Cost Management

Planned Integrations: AWS Cost Explorer, React, OpenTelemetry, alerting, production scheduling

- Building a cloud governance and FinOps platform for cloud resource inventory, cost visibility, ETL execution tracking, and production-oriented backend engineering.
- Implemented a .NET 10 backend foundation using Clean Architecture-style boundaries across API, Application, Domain, Infrastructure, Worker, Migrator, and automated test projects.
- Built Azure resource inventory and cost ingestion foundations using Azure SDK, Azure Resource Graph, Azure Cost Management Query API, PostgreSQL repositories, and ETL job tracking.
- Designed the PostgreSQL persistence model for cloud resources, daily cost records, ETL job runs, provider accounts, tenant-aware data access, and governance-related metadata.
- Added a dedicated database Migrator project to support repeatable schema initialization, migration validation, idempotent reruns, and CI-based database checks.
- Established engineering quality controls including architecture boundary tests, repository static checks, migration verification, GitHub Actions CI, and Terraform validation.
- Added Terraform-based Azure infrastructure scaffolding for repeatable development environments, including resource group, storage account, Service Bus queue, governance tags, and optional Log Analytics.

EDUCATION

Yoobee College of Creative Innovation

2026 – Expected Apr. 2027

Master of Software Engineering

Auckland, New Zealand

University of Technology Sydney

07.2020 – 08.2021

Master of Engineering: Software Systems Engineering

University of Technology Sydney

07.2019 – 07.2020

Bachelor of Science (Honours) in Information Technology: First Class Honours

Nanjing University of Aeronautics and Astronautics

09.2016 – 10.2020

Bachelor's Degree: Software Engineering
